ABSTRACT:

PROBLEM TO BE SOLVED: To solve the problem that a person in charge of transaction
manually performs the original job processing of trade such as the acquisition of
an export application or procedure of customs clearance on the paper base in
addition to electronic settlment processing to be performed in a virtual space area
when the transaction is international in the case of an electronic commercial
transaction in the closed virtual commercial transaction space on the Internet.

SOLUTION: In the server of an electronic commercial transaction system having a
trade function connected to the virtual commercial transaction space constituted on
the Internet, when estimate answer processing is performed between a requested
country and a different country at the time of estimate answer, the tax, postage
and insurance premium for a trade transaction are automatically calculated and
registered while being added to estimate information as reference information, when
ordering/order receiving processing is performed between different countries at the
time of purchase order, workflow information on the trade job is automatically
prepared and registered and trade document information defined on the workflow and
required for the job is automatically prepared.
